

CONTENTS

1. Elements of Polygonal Trigonometry	11
1.1. Introduction	11
1.2. Fundamental relations in (QT)	11
1.3. Polygonal Trigonometry (PT) foundations	12
1.4. Fundamental relations in (PT)	13
1.5. Conclusions of Chapter 1	15
2. Regarding the general character of the Polygonal Trigonometry	16
2.1. Introduction	16
2.2. Classical Trigonometry (CT) a particular limiting case of the Polygonal Trigonometry (PT)	18
2.3. The general character of the Polygonal Trigonometry (PT)	18
2.4. Conclusions of Chapter 2	21
3. Periodic transtrigonometric functions	22
3.1. Introduction	22
3.2. Two essential relations in the Transtrigonometry	22
3.3. The characteristics of transtrigonometric functions	24
3.4. Conclusions of Chapter 3	26
4. The Infratrigonometry, an inferior order neighborhood domain of the Transtrigonometry	27
4.1. Introduction	27
4.2. The characteristics of the infratrigonometric functions	27
4.3. The discussion of a special "at limit" case when $k = 0$	29
4.4. Conclusions of Chapter 4	31
5. The Ultratrigonometry, a superior order adjacent domain of the Transtrigonometry	32
5.1. Introduction	32
5.2. The characteristic of ultratrigonometric functions	32
5.3. The discussion of a special "at limit" case when $k = \infty$	34
5.4. Conclusions of Chapter 5	37
6. The Paratrigonometry and some of its specific symmetries	38
6.1. Introduction	38
6.2. The Paratrigonometry, a general notion which includes CT, QT, PT, IT, TT and UT	38
6.3. The Basic Trigonometric Figures (BTFs) of Paratrigonometry and their implicit characteristic equations	41

6.4. The semiempirical equation for the basic symmetric figures from Paratrigonometry.....	45
6.4. Conclusions of Chapter 6	46
7. Regarding the paratrigonometric equation of the circle	48
7.1. Introduction	48
7.2. Paratrigonometric equations for the entire contour of the circle with radius $R = 1$	49
7.3. Conclusions of Chapter 7	52
8. Some developments of fundamental trigonometric equation	53
8.1. Introduction	53
8.2. Algebraic development of the fundamental equation for BTFs from PRT	54
8.3. The validity of the BTFs fundamental equation in PRT	55
8.4. Conclusions of Chapter 8	57
9. The application of the paratrigonometric fundamental equations in the four trigonometric quadrants	58
9.1. Introduction	58
9.2. The algebraic signs coefficients + (plus) or - (minus)	59
9.3. Conclusions of Chapter 9	62
10. An application case of the paratrigonometric polar coordinates	64
10.1. Introduction	64
10.2. The paratrigonometric functions represented in polar coordinates, applied in the technology of toothed wheels	66
10.3. Conclusions of Chapter 10	68
11. Paratrigonometric functions raised to some powers and their applications	70
11.1. Introduction	70
11.2. The case when paratrigonometric function is raised to some constant powers	73
11.3. The case of a paratrigonometric function rise to a variable power	75
11.4. Conclusions of Chapter 11	78
12. Paratrigonometric functions relative to the finite spirals as the Basic Trigonometric Figures.....	79
12.1. Introduction	79
12.2. Archimedean Spiral, Logarithmic Spiral and Parabolic Spiral having BTFs role in the Paratrigonometry	80
12.3. The Paratrigonometric Spiral Functions	83
12.4. Conclusions of Chapter 12	85
13. Possibilities to represent some symmetric functions by unified equations and some of their applications in the Paratrigonometry	87
13.1. Introduction	87
13.2. The case of the basic function $y = a \cdot x$	87
13.3. The case of the circle segments (quarters)	90
13.4. The hyperbolas case	90
13.5. The case of the cubic parabolas	92
13.6. The case of the exponential functions	93

13.7. An application to the Paratrigonometry	94
13.8. Conclusions of Chapter 13	95
14. A simplified alternative to develop periodic functions in Trigonometric Fourier Series	97
14.1. Introduction	97
14.2. Periodic Functions expressed by using "Matrix Functions", "Matrix Transported Function" and of the "Transport Function"	98
14.3. Examples of obtained periodic functions starting from Matrix Functions	100
14.4. Conclusions of Chapter 14	101
